Design, calculations and manufacturing
of **Storage Systems**

Automate your installation with our shuttle cart **SLIDEBOX**

TURN YOUR DRIVE IN INTO A MODERN AUTOMATED WAREHOUSE

The strength of simplicity

FROM CONVENTIONAL RACKING TO AUTOMATED INSTALLATION

INVESTING IN AUTOMATED HANDLING EQUIPMENT PROVIDES MANY COMPETITIVE ADVANTAGES

Renovate and convert your old deep storage facility for palletized loads into a new, modern facility automatically managed by satellite carts.

Transform your Drive In into an automatic shuttle cart installation, taking advantage of the existing racks and replacing the storage rails to allow the mobility of the shuttle cart throughout the installation.

Conventional DRIVE IN type storage installations

SHUTTLE CART SLIDEBOX

The main feature of our shuttle cart system is to streamline the loading and unloading of goods, without the need for forklifts to access the storage channels.

The shuttle cart circulates by lanes, independently selecting the incoming and outgoing pallets by means of a control tablet, which allows a more efficient warehouse management.

DEVELOPED AND MANUFACTURED ENTIRELY AT ESNOVA

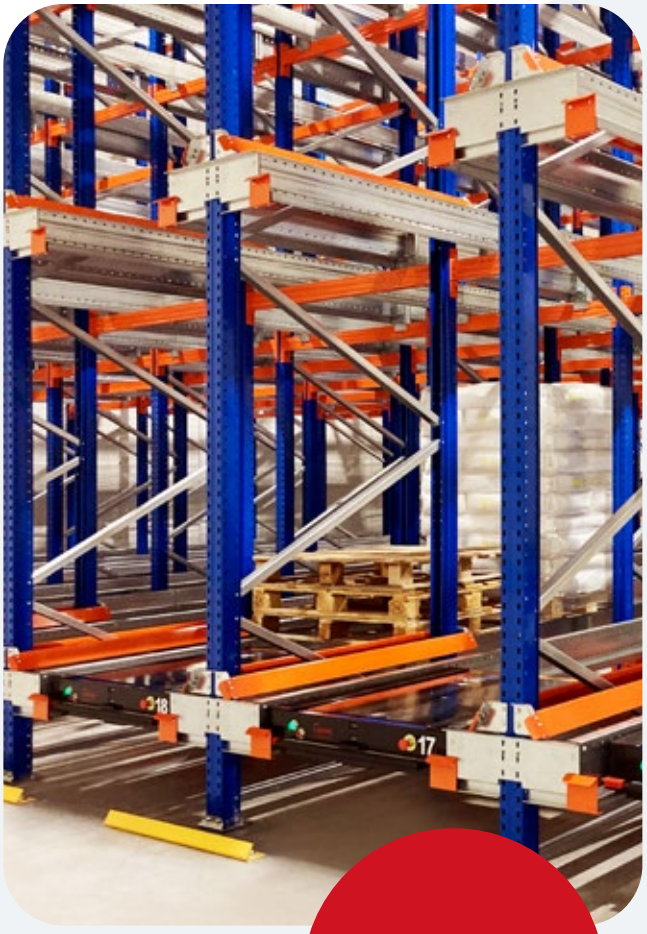

The SLIDEBOX shuttle cart is easily operated from a Tablet, executing the processes designated by the operator, while the operator performs other tasks.

MAIN ADVANTAGES

- Accuracy and speed. Reduction of working time compared to a conventional compact system.
- Increased safety. Forklifts do not have to enter the loading lanes, reducing the risk of accidents to people and racks.
- Ease of use and maintenance, reducing costs due to lower energy consumption.
- Compatible with different types of pallets.

INCREASED SAFETY
